RE: search request for 09/970969

1.UG 22 200

Not sure what you mean by only 3 sequences. The RSL (which has been marked "entered") in the file says that there are 6 sequences. The paper copy supplied by applicant also says that there are 6 sequences.

Sheela

STIC-Biotech/ChemLib To:

Subject: search request for 09/970969

THERE ARE ONLY 3 SEQ FOR THIS NUMBER. **MAUDE**

Please search and interference search SEQ ID No. 1-6 of the above application.

Thanks--

Sheela Huff Art Unit 1642 CM1-8807 mailbox 8E12 305-7866

The modified annexin is useful for imagina vascular thrombl or apoptosis which is associated with response to a chemotherapeutic agent or with rejection as a result of transplantation. The modified annexin can effectively chelate a radionciade and retain annexin bloactivity. It can be readily prepared in high radiochemical yield and with high radiochemical purity. In contrast to conventional conjugation chemistries that provide a distribution of conjugation products, the modified annexin has a single

                                                                                                                                                                                                                                                                                                                                                            9
                                                                The present sequence encodes a modified annexin having an N-terminal chelation site, which comprises an amino acid extension including a glycine and a cysteine residue. The modified annexin is useful for imaging vascular thrombi or apoptosis which is associated with response tro a chemotherapeutic agent or with rejection as a result of transplantation. The modified annexin can effectively circled to a radiouncilde and retain annexin bloactivity. It can be readily prepared in high radiochemical yield and with high radiochemical purity. In contrast to conventional conjugation chemistries that provide a distribution of conjugation products, the modified annexin has a single chelation site remote from the site of biological activity.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      GGATTTGATGAGCGGCTGATGCAGAAACTCTTCGGAAGGCTATGAAAGGCTTGGGCACA

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           240
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      300
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            360
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       360
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The present sequence encodes a modified annexin having an N-terminal chelation site, which comprises an amino acid extension including a glycine and a cysteine residue. The modified annexin is useful for imaging vascular thrombi or apoptosis which is associated with response tro a chemotherapeutic agent or with rejection as a result of transplantation. The modified annexin can effectively chelate a radiounclide and retain annexin bloactivity. It can be readily prepared in high radiochemical yield and with high radiochemical purity. In concrett to conventional conjugation chemistries that provide a distribution of conjugation products, the modified annexin has a single chelation site remote from the site of biological activity.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       1 ATGGCAGGTGGCTGTGGCCATATGGCACAGGTTCTCAGAGGCACTGTGACTTCCCT

                                                                                                                                                                                                                                                                                                                                                                                                      this sequence) comprising the Annexin V gene and a low-molecular urokinase gene, in insect cells. The Annexin V-scu-PA-32 fusion protein, expressed in insect cell strain In-5814, has high affinity for active thrombocytes and has the fibrinolytic activity of urokinase.
                                                                                                                                                                                                                                                                                                                              Annexin V, which has high affinity for active thrombocytes, is used as a carrier molecule to build a thrombus-targeting thrombolytic fusion protein. The protein is the result of expression of a fusion gene
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             121 GATGAGGAGGATCCTGACTCTGTTGACATCCCGAAGTAATGCTCAGCGCCAGGAAATC

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The vascular anti-coagulating protein (VAC)-alpha encoded by this cDNA is used in the preparation of monoclonal antibodies (MAbs). The VAC-alpha is injected into a host animal, in conjugation with eg keyhole limpet haemocyanin, and the B-cells from the immunised hosts are then fused with myeloma calls. The resultant hybridomas (VAA-8 and VAA-9) produce Abs specific to VAC-alpha. The Abs can be used as immunoassay

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  ö
Recombinant placental coagulation inhibitor – useful for the prevention and treatment of thromboses or disseminated intra-vascular coagulation.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                This recombinant DNA sequence comprises a promoter region, ribosome binding site, initiation sequence, termination codon and a transcription terminator in addition to the placental coaquiation inhibitor gene. The polypeptide produced on culturing of transformed host cells exhibits strong anticoagulant activities and is useful for the treat-ment and prevention of eg thrombosis or disseminated intravascular coagulation in the brain, heart and peripheral blood vessels. This invention relates to a combination comprising several CDNAs that are differentially expressed in activated vascular tissue. The invention also discloses a high throughput method for detecting differentially expressed cDNAs in a sample. The CDNAs of the invention may have antiarteriosclerotic; cytostatic; cardiant; hypotensire; antidiabetic; cytostatic; cardiant; hypotensire; and may be used in gene therapy. The CDNAs of the invention may be used in a sample, or screening several molecules or compounds to invention. A protect en compound that specifically binds a cDNA of the invention. A protect en compound that specifically binds a compounds to identify a ligand that specifically binds to the protect or compounds to identify a ligand that specifically binds to be used to detect a produce or purify a nationaly to the protein that can be used to detect a produce or purify a national the protein; creatment of a vascular disease, e.g. atherosclerosis, cancer, coronary artery disease, hypertension, diabetes, pre-eclampsia, ischaemia-

combinant protein from a sample. The cubcas can also be used for large-scale genetic or gene expression analysis of several new nucleic acid molecules. Antibodies to the proteins encoded by the consecute of diseases associated with abnormalities in the expression, and chronic consecuted in the protein. The present sequence consecuted in a variant of the protein. The present sequence consecuted in the protein that is differentially expressed in antibodic consecuted by the protein that is differentially expressed in
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Combination for diagnosing, staging, treating, or monitoring the progression of treatment of a vascular disease, e.g. atherosclerosis, comprises several cDNAs that are differentially expressed in activated vascular tissue -
Human cDNA #162 differentially expressed in activated vascular tissue.
                                             Human, gene; ss; vascular tissue; cytostatic; atherosclerosis; cardiant; hypotensive; antidiabetic; gynaecological; vasotropic; cerebroprotective; gene therapy; vascular disease; cancer; coronary; artery disease; hypertension; diabetes; pre-eclampsia; restenosis; ischaemia-reperfusion injury; stroke;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           http.seqdata.uspto.gov/sequence.html?DocID=20020137081
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Claim 1; Page -; 18pp; English.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      DNA sequence encoding anticoagulant PP4 protein. This inhibits blood coagulation at the thromboplastin stage. The derived protein is 320 amino acids. (Updated on 25-MAR-2003 to correct PF field.) (Updated on 25-MAR-2003 to correct PR fileld.)
                                                                                                                                                                                                                                                                                                                                                                                                                       Anticoagulant; PP4 protein; thromboplastin.
                                                                                                                                                                                                                                                                                                                                                                                                                                                               Location/Qualifiers

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  A human placenta cDNA library (Clontech) was screened to obtain this sequence. The cDNA does not contain a leader peptide sequence, indicating that PAP-I is probably not constitutively secreted. The product binds to phospholipid and inhibits phopholipase A2. The protein can substitute heparin or other anticoagulants in the treatment of disseminated intravascular coagulation, deep vein thrombosis, or other disorders. It also has antiinflammatory
                                                                                                                                                                                  anticoagulant production
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ó

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               693
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     AATTGAGGAAACCATTGACCGCGAGACTTCTGGCAATTTAGAGCAACTACTCCTTGCTG7 740
                                                                                        The DNA is produced by determining the amino acid sequence of isolated and highly purified VAPs, constructing DNA probes on the basis of this sequence, using the probes to search through suitable cONA libraries, isolating cDNA that hybridises with the probes, by inserting the cDNA into a suitable vector, and using the vector to transform a host organism. VAC-alpha has anticoagulant activity under certain conditions, but loses this activity in the event of severe bleeding. It acts by inhibiting conversion of factor x to factor Xa and conversion of prothrombin to thrombin. It is structurally related to lipocortin I (Nature, 320, 77, 1986) and lipocortin II (Cell, 46, 191/120, 1986) and has similar antiinflammatory and phospholipase inhibitory activity. (Updated on 25-MAR-2003 to correct PR field.)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       93

organism. VAC-alpha has anticoagulant activity under certain conditions, but loses this activity in the event of severe bleeding. It acts by inhibiting conversion of factor X to factor Xa and conversion of prothrombin to thrombin. It is structurally related to lipocottin (Nature, 320, 77, 1986) and lipocottin II (Cell, 46, 191/120, 1986) and thas similar antiinflammatory and phospholipase inhibitory activity. Lipocortins are anti-inflammatory agents and can be used to treat arthritic, allergic, dermatologic, ophthalmic, and collagen diseases.

associated proteins represented in AABSB06 - AABSB0848 Lung cancer associated proteins represented in AABSB06 - ABSB0848 Lung cancer associated proteins and polynucleotide sequences, their agonists, and antendorstandy neuroprotective; cytostetic; cardioactive; and munomodulatory; muscular active general; vulnerary; gastrointestinal general; nephrotropic; antilnfective; gynecological; or antibacterial cartivity. The invention also includes antibodies specific for the protein or polynucleotide sequences. The lung cancer associated polynucleotide sequences may be used for detection of lung cancer, chromosome identification, as chromosome markers, and for numerous other disorders such as neural, immune, muscular, reproductive, gastrointestinal, pulmonary, cardiovascular, reproductive, disorders such as neural, immune, muscular, reproductive, disorders preprinted and proliferative infectious diseases. Polynucleotide sequences AAF18433 and infectious diseases. Polynucleotide sequences AAF18433 and peptide AABS8549 are used in the course of the invention for the course of the invention for the course of the invention for the course of the invention and protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     232

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

                                                                                                                                                                                                                                                                                                                            9
                                                           The present sequence encodes a modified annexin having an N-terminal chelation site, which comprises an amino acid extension including a glycine and a cysteine residue. The modified annexin is useful for imaging vascular thrombi or apoptosis which is associated with response to a chemotherapeutic agent or with rejection as a result of transplantation. The modified annexin can effectively chelate a radiouncilde and retain annexin bloactivity. It can be readily prepared in high radiochemical yield and with high radiochemical purity. In contrast to conventional conjugation chemistries that provide a distribution of conjugation products, the modified annexin has a single chelation site remote from the site of biological activity.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           ATGACTATATCAGGATTTCAAATTGAGGAAACCATTGACCGCGAGACTTCTGGCAATTTA

The modified annexin is useful for imaging vascular thrombl or apoptosis which is associated with response to a chemotherapeutic agent or with rejection as a result of transplantation. The modified annexin can effectively chelate a radionchide and retain annexin bloactivity. It can be readily prepared in high radiochemical yield and with high radiochemical purity. In contrast to conventional conjugation chemistries that provide a distribution of conjugation products, the modified annexin has a single
                                                                                                                                                                                                                                                                                                                 ACCTCTCTTTATTCCATGATTAAGGGAGATACATCTGGGGGACTATAAGAAAGCTCTTCTG

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               09
                                                                                                                                                                                                                                                                                                                                                                                                     The present sequence encodes a modified annexin having an N-terminal chelation site, which comprises an amino acid extension including a glycine and a cysteine residue. The modified annexin is useful for imaging vascular thrombl or apoptosis which is associated with response to a chemotherapeutic agent or with rejection as a result of transplantation. The modified annexin can effectively chelate a radionuclide and retain annexin bloactivity. It can be readily prepared in high radiochemical yield and with high radiochemical purity. In contrast to conventional conjugation chemistries that provide a distribution of conjugation products, the modified annexin has a single
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             GGATTTGATGAGGGGCTGATGCAGAAACTCTTCGGAAGGCTATGAAAGGCTTGGGCACA

The vascular anti-coagulating protein (VAC)-alpha encoded by this cDNA is used in the preparation of monoclonal antibodies (WAbs). The VAC-alpha is injected into a host animal, in conjugation with egy keyhole limpet haemocyanin, and the B-cells from the immunised hosts are then fused with myeloma cells. The resultant hybridomas (VAA-8 and VAA-9) produce Abs specific to VAC-alpha. The Abs can be used as immunoassay reagents to detect VAC proteins, as affinity ligands for purifice. of VACs and as medicaments for binding and/or neutralising VAC proteins in vivo. See also AMS19134 and EP-181465.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 binding site, initiation sequence, termination codon and a transcription termination to the placental coagulation inhibitor gene. The polypeptide produced on culturing of transformed host cells exhibits strong anticoagulant activities and is useful for the treatment and prevention of eq thrombosis or disseminated intravascular coagulation in the brain, heart and peripheral blood vessels. (Updated on 10-MAR-2003 to add missing OS field.) (Updated on 25-MAR-2003 to correct PF field.) (Updated on 25-MAR-2003 to correct PR field.)

This invention relates to a combination comprising several CDNAs that are differentially expressed in activated vascular tissue. The invention also discloses a high throughput method for detecting differentially expressed cDNAs in a sample. The CDNAs of the invention may have antiatrenfosclerotic; cytostatic; cardiant; hypotensive; antidiabetic; gynaecological; vasctropic and cerebroprotective activities and may be used in gene therapy. The CDNAs of the invention may be used an a high-throughput methods for detecting differential expression of one or more cDNAs in a sample, or screening several molecules or compounds to identify a molecule or compound that specifically binds a CDNA of the invention. A protein encoded by the CDNA may be used to screen several molecules or compounds to identify a natibody to the protein that can be used to detect a protein in a sample or purify an antial or recombinant protein from a sample. The uncleotides may be useful for diagnosing, staging, treating, or monitoring the progression of treatment of a vascular disease, e.g. atherosclerosis, cancer, coronary retery disease, hypertension, diabetes, pre-eclampsia, ischaemia-repertusion injury, restenosis, or stroke. The cDNAs can also be used for large-scale genetic or gene expression analysis of several new
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Combination for diagnosing, staging, treating, or monitoring the progression of treatment of a vascular disease, e.g. atherosclerosis, comprises several cDNAs that are differentially expressed in activated

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 801
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            921
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         861
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   981
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              921
nucleic acid molecules. Antibodies to the proteins encoded by the CDNAs are useful for diagnosing pre-pathologic disorders, and chronic or acute diseases associated with abnormalities in the expression, embount or distribution of the protein. The present sequence represents a cDNA of the invention that is differentially expressed in activated vascular tissue.

Note: The sequence data for this patent did not form part of the specification, but was obtained in electronic format directly from USPTO at http.seqdata.uspto.gov/sequence.html?DocID=20020137081.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               as a carrier molecule to build a thrombus-targeting thrombolytic fusion protein. The protein is the result of expression of a fusion gene (this sequence) comprising the Annexin V gene and a low-molecular urokinase gene, in insect cells. The Annexin V-scu-PA-32 fusion protein, expressed in insect cell strain Tn-5B1-4, has high affinity for active

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           A human placenta cDNA library (Clontech) was screened to obtain this sequence. The cDNA does not contain a leader peptide sequence, indicating that PAP-I is probably not constitutively screted. The product binds to phospholipid and inhibits phopholipase A2. The protein can substitute heparin or other anticoagulants in the treatment of disseminated intravascular coagulation, deep vein thrombosis, or other disorders. It also has antiinflammatory
                                                                                                                                                                          PAP-I cDNA from human placenta, used for anticoagulant production
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           ;

                                                                                                    The DNA is produced by determining the amino acid sequence of isolated and highly purified VAPs, constructing DNA probes on the basis of this sequence, using the probes to search through suitable colnA libraries, isolating cDNA that hybridises with the probes, by inserting the CDNA into a suitable vector, and using the vector to transform a host organism. VAC-alpha has anticoagulant activity under certain conditions, but loses this activity in the event of severe bleeding. It acts by inhibiting conversion of factor X to factor Xa and conversion of prothrombin to thrombin. It is structurally related to lipocortin I (Nature, 320, 77, 1986) and lipocortin II (Cell, 46, 191/120, 1986) and has similar antiinflammatory and phospholipase inhibitory activity. (Updated on 25-MAR-2003 to correct PR field.)

organism. VAC-alpha has anticoagulant activity under certain conditions, but loses this activity in the event of severe bleeding. It acts by inhibiting conversion of factor X to factor Xa and conversion of prothrombin to thrombin. It is structurally related to lipocortin (Nature, 320, 77, 1986) and lipocortin II (Cell, 46, 191/120, 1986) and has similar antilinflammatory and phospholipase inhibitory activity. (Updated on 25-MAR-2003 to correct PR field.)

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        polynucleotide sequences AAF17982 - AAF18424 encode human lung cancer associated proteins represented in AA58106 - AA58548. Lung cancer associated proteins and polynucleotide sequences, their agonists, and antagonists may have neuroprotective; cytostatic; cardioactive; cardioactive; cardioactive; cardioactive; cardioactive; mannomodulatory; muscular active general; vulnerary; gastrointestinal general; nephrotropic; antiinfective; ginecological; or antibacterial activity. The invention also includes antibodies specific for the protein or polynucleotide sequences. The lung cancer associated polynucleotide sequences may be used for detection of lung cancer, chromosome identification, as chromosome markers, and for numerous other disorders such as neural, immune, muscular, reproductive, gastrointestinal, pulmonary, cardiovascular, reproductive, gastrointestinal, pulmonary, cardiovascular, reproductive, cardisorders The proteins may also be used in the treatment of wounds and peptide AA598549 are used in the course of the invention for the course of the invention for the course of the invention for the course of the course 
                                                                                                                                                                                                                                                                                                                                                                                                                      Lung cancer associated gene sequences, referred to as lung cancer antigens, useful for treatment, prevention, and diagnosis of disorders such as lung cancer .
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Sequence 1637 BP; 455 A; 349 C; 378 G; 450 T; 5 other;
